

## TABLE OF CONTENTS

### VOLUME I : DISCRETE DISTRIBUTIONS

CHAPTER 1: INTRODUCTION AND PRELIMINARIES	1 - 37
1. Introduction	1
2. Frequency Distributions	1- 4
3. The Standard Descriptive Statistics	4 - 8
4. Less Familiar Descriptive Statistics	8 - 9
5. The Problem of Heterogeneity	9 - 16
6. Some Useful Tools: Generating Functions	16 - 19
7. Some Useful Tools: Difference Equations	19 - 21
8. Some Useful Tools: Methods of Estimation	21 - 31
9. Some Useful Tools: Likelihood Ratio Tests	32 - 33
10. Some Useful Tools: Open-ended Classes in Frequency Distributions	33 - 35
11. The Practice of Maximum Likelihood Estimation (MLE)	35 - 37
CHAPTER 2: UNDERSTANDING FREQUENCY DISTRIBUTIONS	38 - 70
12. Some Logical Preliminaries	38
13. An Explanatory Model: The Binomial Distribution	39 - 44
14. An Explanatory Model: The Poisson Distribution	44 - 51
15. An Example of the Construction of Macro Models	51 - 57
16. Testing Models	57 - 66
17. The Analogy with Regression Analysis	66 - 68
18. Continuous Distributions and an Explanatory Model	69 - 70

## CHAPTER 3: DISCRETE DISTRIBUTIONS WITH FIRST-ORDER DIFFERENCE

EQUATIONS WITH LINEAR COEFFICIENTS	71 - 158
19. The Advantages of Difference Equations for Discrete Distributions	71 - 75
20. First-order Difference Equations with Linear Coefficients	75 - 77
21. The Ranges of Observed Distributions and Fitted Theoretical Distributions	77 - 81
22. The Information Summary for Probability Distributions	81 - 83
23. The Ten Distributions with Linear Coefficients	83 - 146
1. The geometric distribution	83 - 88
2. The Poisson distribution	88 - 93
3. The log series distribution (LSD)	94 - 100
4. The Yule distribution	100 - 104
5. A minor, unnamed distribution (#5)	104 - 108
6. The Waring distribution	108 - 117
7. The Bardwell & Crow family of distributions (BC)	117 - 124
8. The Katz family of distributions	124 - 136
9. The Evered family of distributions	136 - 141
10. The Tripathi & Gurland family of distributions (TG)	141 - 146
24. Comparisons Among the Ten Distributions: Range	146 - 151
25. Comparisons Among the Ten Distributions: Versatility	151 - 155
26. Scaling and Considerations of Size	155 - 158

CHAPTER 4: DISCRETE DISTRIBUTIONS WITH FIRST-ORDER DIFFERENCE EQUATIONS WITH NON-LINEAR COEFFICIENTS	159 - 210
27. An Overview of This Chapter	159 - 161
28. The Ord Family of Theoretical Distributions	162 - 167
29. The Theoretical Distributions Included Within the Ord Family	167 - 169
30. Examples of the Ord Distribution	169 - 175
31. Another Ord-type Model	175 - 179
32. The Carver System	179 - 183
33. Examples of the Carver System	184 - 187
34. Differences Between the Theoretical and Observed Ranges	187 - 191
35. Forcing the Range of Theoretical Distributions	191 - 196
36. Determining the Range of Theoretical Distributions	196 - 198
37. Convergence of the Carver and Ord Systems	198 - 203
38. The Strength of Methods Based on First-order Difference Equations	203 - 206
39. Hypergeometric Functions and Probability Distributions	207 - 210

CHAPTER 5: OTHER THEORETICAL DISTRIBUTIONS	211 - 302
40. An Overview of This Chapter	211 - 212
41. The Zeta Distribution	212 - 214
42. Deducing Difference Equations from Explicit Formulas for Probabilities	214 - 218
43. Some Interrelationships Involving Probability Generating Functions	218 - 222
44. Mixing Models	223 - 224
45. Generalized Distributions	224 - 226
46. Contagious Distributions	226 - 228
47. Some Generalized Theoretical Distributions	228 - 230
1A : NBD - log series distribution	230 - 232
1B : log series - NBD distribution	232 - 234
2. Binomial - log series	234 - 238
3. Poisson - log series distribution	238 - 241
4. NBD - Poisson distribution	241 - 243
5. Polya - Aeppli (geometric - Poisson) distribution	243 - 246
6. Thomas (Poisson - Poisson) distribution	246 - 250
7. Neyman Type A (Poisson - Poisson) distribution	250 - 259
8. Binomial - Poisson distribution	259 - 265
9. Poisson - binomial distribution	265 - 268
48. Two Illustrative Examples	268 - 273
A. Poisson-Poisson distribution	268 - 271
B. Poisson-Pascal distribution	271 - 273

49. Some Mixed Distributions	273 - 274
1. Sichel's distribution	274 - 280
2. Fisher's Mixed Poisson (Poisson - truncated normal) distribution	280 - 286
3. Poisson - lognormal distribution	286 - 289
50. Modified distributions	290
51. Some Comparisons	290 - 295
52. A Test of Possible Theoretical Distributions	295 - 300
53. The Usefulness of Generalized and Mixed Models	300 - 302
CHAPTER 6: FITTING DISCRETE FREQUENCY DISTRIBUTIONS: STRATEGY AND TACTICS	303 - 346
54. Explanation and Description: The Strategy of Fitting Distributions	303 - 306
55. Errors in the Observed Distribution	306 - 311
56. Heterogeneity and the Problem of the 0-class	311 - 317
57. Heterogeneity and Multimodality	318 - 326
58. Heterogeneity Without Multimodality	326 - 337
59. The Problem of Too Many Observations	337 - 344
60. Distributions That May Have Been Controlled	344 - 346
61. Concluding Comments on Discrete Distributions	346

VOLUME II: CONTINUOUS DISTRIBUTIONS

CHAPTER 7: CONTINUOUS DISTRIBUTIONS	347 - 355
62. Continuous Distributions: The Basic Tools	347 - 348
63. Differential Equations and Continuous Distributions	348 - 351
64. Models for Continuous Distributions	351 - 353
65. The Goals of Part II	353 - 355
CHAPTER 8: THE EXPONENTIAL, WEIBULL, AND OTHER LIFETIME DISTRIBUTIONS	356 - 402
66. The Exponential Distribution	356 - 362
67. The Hazard Rate and Lifetime Distributions	362 - 366
68. Other Approaches to Lifetime Distributions	366 - 367
69. The Weibull Distribution	368 - 372
70. Examples of the Weibull Distribution	372 - 377
71. Fitting the Gamma Distribution	377 - 382
72. Fitting Other Lifetime Distributions	382 - 385
73. The Problem of Censored Data	385 - 389
74. Decreasing Hazard Rates	389 - 393
75. Using the Hazard Rate to Identify the Theoretical Distribution	393 - 397
76. Irregular Patterns of the Hazard Rate	398 - 402

CHAPTER 9: THE PARETO AND OTHER DISTRIBUTIONS OF INCOME AND WEALTH	403 - 438
77. An Overview of Income Distributions	403 - 404
78. The Problem of the Size of Income Distributions	404 - 407
79. Observed Income Distributions With Various Total Frequencies	407 - 410
80. The Pareto Distribution	410 - 414
81. Examples of the Pareto Distribution	414 - 417
82. Theoretical Distributions for Observed Income Distributions	418 - 422
83. Theoretical Distributions for Logs of Incomes	422 - 427
84. Some Theoretical Distributions Specifically for Income Distributions	427 - 433
85. Fitting Homogeneous Income Distributions	433 - 438
CHAPTER 10: THE NORMAL DISTRIBUTION, KAPTEYN'S ARGUMENT, AND JOHNSON'S SYSTEM	439 - 487
86. Plan of This Chapter	439
87. The Central Limit Theorem	440 - 442
88. Some Examples of Normal Distributions	443 - 447
89. The Lognormal Distribution	447 - 450
90. Examples of the Lognormal Distribution	450 - 454
91. Kapteyn's Argument	455 - 458
92. Using Kapteyn's Transformations	458 - 460
93. Examples of Kapteyn's Transformations	460 - 466
94. The Johnson System	466 - 474
95. Examples of Johnson's $S_U$	474 - 482
96. Examples of Johnson's $S_B$	482 - 487

CHAPTER 11: THE PEARSON SYSTEM	488 - 567
97. An Overview of This Chapter	488 - 489
98. Pearson's Differential Equation	489 - 490
99. General Characteristics of the Solutions	490 - 491
100. Craig's $\delta$	491 - 493
101. Craig's Chart for the Pearson System	493 - 495
102. The Thirteen Pearson Types: An Overview	495 - 496
103. Type III: The Gamma Distribution	497 - 502
104. Type X: The Exponential Distribution	502 - 504
105. Quadratic Denominators in the Pearson System	505 - 506
106. Type I: The Beta Distribution	506 - 514
107. Type IV	514 - 519
108. Type VI: The Beta Distribution of the Second Kind	519 - 525
109. Why Are There So Few Type VI Distributions?	525 - 529
110. Type V	529 - 533
111. The Carver System and the Pearson System	533 - 546
112. Type VII	546 - 549
113. Type II	549 - 552
114. Types VIII, IX, and XI	552 - 559
115. Type XII	560 - 563
116. A Formerly Famous Argument About a Type I	563 - 565
117. The Pearson System: An Overview	566 - 567

CHAPTER 12: A MISCELLANY OF MODELS	568 - 628
118. The Multitude of Models	568 - 569
119. When Is a New Model Needed?	569 - 573
120. The Burr Family	573 - 578
121. McKay's Bessel Function Distributions	578 - 580
122. Elaborations of Pearson's Equation	581 - 590
123. Carver Analogues to Elaborations of Pearson's Equation	590 - 606
124. Some Other Carver Analogues	607 - 612
125. Error Distributions	612 - 621
126. The Quartic Exponential Distribution	621 - 624
127. Generalized Rayleigh Distributions	624 - 627
128. Recapitulation of Useful Models	627 - 628

CHAPTER 13: THE TEST OF PRACTICE	629 - 721
129. The Structure of This Chapter	629 - 630
130. Two Discrete Distributions With Many Measurements	620 - 636
A. A Discrete Example With a Multitude of Fits	630 - 634
B. A Discrete Example With Alternative Explanations	634 - 636
131. Three Large Distributions of Age at Marriage	636 - 646
132. Two Large Distributions of Number of Children	646 - 650
133. Some Distributions From the Analysis of Literary Style	650 - 661
134. Some Distributions From Quantitative Ecology	661 - 669
135. Distributions Related to Human Abilities	669 - 678
136. Two Discrete Distributions From Business With Alternative Fits	678 - 681
137. Heterogeneity and the Dissection of Distributions	681 - 687
138. Some Distributions Based on Life Processes, Disease, and Death	687 - 695
139. Another Intransigent Distribution	696 - 701
140. The Morrison Family	701 - 706
141. The U.S. Income Distribution for 1972	706 - 711
142. The Analysis of Human Mortality Distributions	711 - 721

FOOTNOTES FOR VOLUME I	722-739
FOOTNOTES FOR VOLUME II	740-791
GUIDE TO THE INDEXES	792-793
EXAMPLES	794-799
MADE-UP DISTRIBUTIONS	800
FITS OF THEORETICAL DISTRIBUTIONS	801-820
GENERAL INDEX	821-837
